THE RESILIENT WORKPLACE

Enable, empower and secure your workplace

In today's digital age, the workplace has evolved. Your organization needs to be able to protect and support your employees by providing the right tools in creating an optimal digital experience. At the same time, it's crucial to safeguard personal information, data, applications and endpoints from potential breaches. How can you deliver an excellent digital workplace experience without compromising on cyber security? Meet The Resilient Workplace.

Challenges

Organizations strive to empower and secure their workforce. However, they face significant challenges when it comes to providing the right digital tools, ensuring employee efficiency and obtaining security insights.

Different tasks, different tools

IT administrators and employees often use separate, unconnected tools to carry out daily tasks. Workplaces are typically provisioned and managed using various tools and applications. A modern workplace should be provisioned and managed by a modern, internet-connected management solution.

Visibility matters

You can only improve what you can see and manage. Companies are often unaware of their workplace's complete digital capability and lack insights into employee efficiency.
Acquiring comprehensive cyber security visibility is challenging, as cyber security solutions are dispersed throughout the workplace, whether as built-in separate tools, or overarching solutions. Therefore, it is difficult to implement preventive measures and corrective actions across the workforce.

Balancing security and usability

Employees already receive numerous notifications and alerts throughout the day, such as emails, chat messages and task reminders. Often, they tend to ignore security alerts and perceive them as intrusive.

READ MORE ABOUT OUR SOLUTIONS
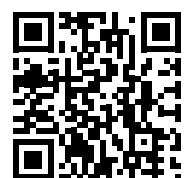

Our security approach

Cegeka advances the digital workplace and its security by helping organizations to improve their cyber resilience. We implement a continuous process of security improvement to create a resilient workplace within your organization.

Assess

We assess your business environment's readiness to offer a digital workplace and the risks it may pose. Using workshops, we examine your digital workplace from various angles: "Modernize", "Cloudify", "Centralize" and "Standardize". This approach enables us to prioritize your resources and deliver a focused plan to improve and achieve a resilient workplace.

Prevent

We put everything in place to protect your devices, reduce the risk of attack and look after your assets. This minimizes the likelihood of any security issues and limits the impact of an eventual breach.

Detect & respond

Cegeka provides 24x7 Managed Detection & Response (MDR) capabilities through our European C-SOR2C (Cyber Security Respond and Recover Operations Center). The Resilient Workplace fits into our larger MDR portfolio, offering services such as Network Detection & Response (NDR), Brand Intelligence and eXtended Detection & Response (XDR). As every second counts after a security breach has been detected, Cegeka responds 24/7 to limit any damage to your digital workplace. With our integrated approach, there is no need to outsource an IT management team. This is all done as part of The Resilient Workplace, where security and IT management are seamlessly delivered.

Recover

Central management of your modern workplace's endpoints enable a smooth recovery from any breaches and an unobtrusive experience for the end user. This quickly restores your business operations with minimal or no data loss.

Our solution

The Resilient Workplace integrates modern cyber security with a state-of-the-art digital workplace.

Enablement

Cegeka equips your workplace with the right tools, incorporating implicit cyber security into your endpoints. We have the technological know-how to design and secure your digital workplace based on our fundamental principles. The resilient workplace is designed through workshops, and best practices are continuously provided by our workplace advisors.

Empowerment

Cegeka works in close collaboration with your organization to help your employees use their digital workplace efficiently. Our solutions and services enable them to focus on their core tasks, benefit from cloud productivity platforms and eliminate intrusive security alerts. We deliver a digital experience your employees can trust. We offer converged IT & security observability to administrators and management using our customer engagement portal, Horizon. Our security advisors also provide insights on how to continuously improve your Cyber Resilience.

Security

Cegeka ensures security is integrated into your workplace by design. We unburden employees from additional security distractions, allowing them to focus on their core tasks without interruption, contributing to a better user experience. Security controls are implicit and non-functional, protecting your workplace without disrupting employees. Our dedicated security experts at Cegeka's 24x7 C-SOR2C security alerts from detection through to response and recovery. This unique end-to-end security incident handling makes your digital workplace a Resilient Workplace.
